

Safety Suggestions

Legal Requirements for Safety Suggestions

There is no specific legal background to this activity, except in the context of general follow through of legal obligations and consultation with employees. Anyone ought to be able to make improvement suggestions or register concerns

Procedure for Safety Suggestions

From time to time, important issues, suggestions and complaints will arise for which there is no immediate solution practicable. This may be due to budget, timing, priorities or other human/technological resourcing

On such occasions, it is *recommended* the issue is created in the **Safety Suggestions** file. This enables an outline of the issue to be stored with accompanying details for future reference

How to create Safety Suggestions

Open a **Safety Suggestions** file under the **Safety Ideas** heading. SafetyBase prompts you to enter an outline description of the issue

If you have advanced versions of SafetyBase, they prompt you to include justification in terms of costs/benefits

Using Tasks to assist with Safety Suggestions

Tasks can be notifications, instructions, alerts or corrective actions associated with a particular file. You can add Tasks as you go during data entry, using the inline **New Task** button in your screen. You can also use the Toolbar at the bottom of your screen during data input, or the **Tasks** tab after you submit the file

As you create a file, SafetyBase may automatically set suggested Tasks, depending on some of your droplist selections. Watch for inline informational messages, which are there to alert you if a droplist might create an automatic Task

Please note that although these automatic Tasks may be created as helpful prompts, they do have generic wording, so you have the choice of creating Tasks yourself. This is advisable if you prefer the wording to be specific or personal. If appropriate, you can select the **"Recurring"** button, which lets you create a repeating schedule, (say, an inspection, review or check-up interval)

When any Task is set in the system, it will display in the form you created, a summary tab in the file and in the Task List of the person it is allocated to (Recurring Tasks don't show until they are due). Tasks are also e-mailed to the allocated person on the required number of days prior to the Due Date

A small number of tasks have been set as mandatory (example, reporting serious injuries to the statutory authority). *These cannot be deleted*

SafetyBase Tips and Tricks for creating Safety Suggestions

After submitting the file, you can set it as a follow up Task for the future. By doing so, you (or the person you allocate the Task to) will receive an e-mail linked to the file at the time specified

Consider associating an electronic document (example, an existing image, pdf, spreadsheet, document, video etc), using the **"Attach Documents"** tab, or inline toolbar at the bottom of your screen while entering data. Record the document's details by completing the appropriate data fields, then click Attach Document. The document will upload and be available for viewing. Many file types will display as a thumbnail

You can associate a SafetyBase file using the **"Link Files"** inline button on the toolbar at the bottom of the screen while entering data, or afterwards, using the Tasks tab (example, Hazard, Fault Report, Accident Investigation or similar file that has direct relevance): Record the file's details by completing the appropriate data fields, then click ADD. Use the progressive filtering of the drop lists and ADD the file you want. The file will be linked. If you follow the link, the linked file will automatically have a link back to the file you came from

Remember to link People with this file type, using the **"Associate People"** inline button on the toolbar at the bottom of the screen while entering data, or afterwards, using the Associate People tab. Doing this will build an automatic safety history for each person, which you can view by clicking on the person's name anywhere in the account

Check file history in the **"Status Log"** tab. This automatically records status changes to the file. If you would like to monitor the file, click the **"Watch"** button at the top of the file summary. This will place the file on your Watchlist and e-mail you whenever the file status changes
